

CHRISTIAN TANNAHILL

Full Stack Software Engineer

Email: christiantannahill2@gmail.com • LinkedIn: linkedin.com/in/christian-tannahill

GitHub: github.com/cstannahill • Portfolio: cstannahill-software-dev.vercel.app

SUMMARY

Dynamic **full-stack software engineer** with **3 years** of extensive experience in developing robust applications and APIs, leveraging technologies such as **TypeScript**, **C#**, and **Python**. Expertise in modern frameworks including **React** and **Next.js**, alongside a strong foundation in backend systems with **Node.js**, **FastAPI** and **.NET Core**. Committed to delivering high-quality, user-centric solutions while seamlessly **integrating AI** and **serverless architectures** to enhance application functionality. Proven ability to adapt quickly and effectively across diverse technical landscapes, driving innovation and operational efficiency.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#, SQL, T-SQL

Frontend: React, Next.js, HTML, CSS, jQuery, Redux, Tailwind CSS, Bootstrap

Backend: .NET (ASP.NET Core), FastAPI, REST API design

Databases: PostgreSQL (Supabase, Neon), Microsoft SQL Server (MSSQL), MongoDB, SQLite, DynamoDB, Firebase

Cloud & Infrastructure: AWS (Lambda, API Gateway, S3, DynamoDB, Cognito, CloudWatch, Amplify), Vercel

AI Integration: OpenAI, AWS Bedrock, Hugging Face, Anthropic, Ollama, OpenRouter

Dev Tools: Git, GitHub, GitHub CLI, Postman, Vite, npm, pnpm, pip, VS Code, curl, jq

DevOps & Systems: Linux (Ubuntu, WSL2), Docker, Bash, Zsh, GitHub Actions, IaC (SAM, CDK)

Methodologies: Kanban, Scrum, Agile, Daily Standups, Weekly Retrospectives, Sprint Planning

EXPERIENCE

Independent Software Engineer

Self-Employed - *Remote*

Apr 2024 – Present

Developing full-stack applications and backend systems to expand technical depth, explore AI integrations, and demonstrate end-to-end delivery of deployable solutions.

TrendDev - [Github](#) | [Live Site](#)

AI-powered job market analytics platform analyzing 500+ tech job postings daily to provide salary insights, skill gap analysis, and career path recommendations.

- Architected serverless data pipeline processing **1000+** job postings **daily** using **AWS Lambda**, **EventBridge**, **DynamoDB**, and **S3**, extracting **4,000+** unique technologies and calculating **real-time market demand** and **salary insights**
- Built **AI-powered** resume analysis system using **Amazon Bedrock** (Nova Pro) that generates personalized insights including **current market value**, **skill ROI calculations**, and career progression recommendations with **85-90%** role fit scores
- Developed **React + TypeScript** dashboard with **authentication (AWS Cognito)**, allowing users to upload/manage

20 resumes, **visualize** skill stack completeness scores, and view job recommendations **filtered by 900+** technologies

LegisTrack - [Github](#) | [Live Site](#)

Legislative tracking app that simplifies U.S. federal bills and executive orders using AI summarization.

- Created a Next.js 15 (App Router) and Inngest/AWS Lambda web application to accurately parse and summarize the dense legalize in US legislation and executive orders
- Designed **normalized schema** to handle bills, sponsors, votes, and amendments efficiently using **PostgreSQL (Prisma ORM)** allowing for linking of companion bills, categories, members, and statuses
- Integrated **Claude AI**, **OpenRouter (DeepSeek v3.1)**, and **OpenAI** models via API / adapter to generate plain-English legislative summaries efficiently, allowing for **~10 bills to be processed with an accurate summary generation and key points identified for less than \$0.01**

Programmer

AnswerNet - *Remote*

Nov 2022 – Apr 2024

- Designed and maintained end-to-end **ETL pipelines** in .NET, processing large lead files and automating SFTP transfers, **reducing manual intervention by 70%**.
- Architected and supported .NET APIs, improving integration capabilities with OnPage callback handling and legacy VB APIs.
- Enhanced campaign operations through dynamic CallScripter scripts, **SSRS reports**, and REST API troubleshooting.
- Implemented **performance monitoring** and **optimization strategies** to ensure application efficiency.
- Collaborated on cross-functional teams to drive project success and implement best practices.

Full Stack Software Engineer

Carte – *Remote*

Aug 2022 – Nov 2022

- Architected and developed a comprehensive .NET analytics API, creating all controllers, service layers, and data-access logic to power a **real-time admin dashboard**. Engineered backend services to aggregate and map complex data from multiple **SQL stored procedures** (for users, orders, and revenue) into C# models.
- Engineered the **mobile-first React ordering pipeline**, from item customization to **Stripe**-powered checkout.
- Architected a complex customization modal that orchestrated a multi-step API process: (1) create the base cart item, (2) retrieve the new item ID, and (3) batch-insert all item modifications, ensuring **transactional integrity**.
- Authored a suite of **high-performance T-SQL stored procedures** to power the admin analytics dashboard. These procedures **aggregated complex metrics (users, orders, revenue) across multiple timeframes** and returned data pre-formatted as JSON (FOR JSON AUTO) to **reduce API-level processing** and **minimize response latency**.

CERTIFICATIONS

FULL STACK SOFTWARE DEVELOPMENT BOOTCAMP - SABIO

Los Angeles, CA - July 2022 – Nov 2022

Completed 530+ hours of intensive training in ReactJS, .NET, SQL, and modern web development practices. Mentored peers and contributed to business-critical projects during the program.
